

Zanzibar - The Collaborative Procurement Solution for UK Government

Background

Zanzibar is the UK Government's strategic collaborative electronic procurement system, recommended by the Operational Efficiency Review as key to driving collaboration across public sector buying. Zanzibar is operated as a secure hosted managed service and is available on a pre OJEU'd framework to anyone in UK public sector from Government's delivery partner, ProcServe.

Zanzibar uses leading edge web technology and business processes to deliver a state of the art electronic purchasing solution. Using Zanzibar, government buyers and suppliers can trade in a fast, secure and efficient environment. By bringing together the very best value government contracts in a single platform, Zanzibar opens the door to collaboration across public sector buying organisations and gives access to the best value deals. Best of all, Zanzibar captures each detail of every transaction passing through its portals to provide real time, granular management information on every aspect of spend - who, on what, with whom, when and how much - in every possible combination.
