

Solutions

ProcServe offers a cloud-based solution for businesses who wish to buy goods and services from their suppliers electronically, saving time and money. The solution overcomes a major barrier to electronic procurement, namely that buyers and suppliers use a wide range of separate back office systems that receive and process data in different formats. Our key offering is the '**ProcServe Commerce Hub**', which enables buyers and suppliers to get connected and transact easily and efficiently.

By connecting to the ProcServe Commerce Hub, buyers and suppliers automatically belong to the '**ProcServe Commerce Network**' which provides the ability to join and share procurement information with similar organisations. This provides the potential to create 'buying hubs' or 'communities' to aggregate purchasing power and lower the costs of buying day-to-day goods and services.

The ProcServe Commerce Hub

The ProcServe Commerce Hub is a powerful set of tools and utilities, accessed as a cloud-based service, providing buyers and suppliers with complete control and visibility of their eProcurement connections.

Manage catalogue content, send and receive price quotations, process procurement documents, all within a single eCommerce hub. There is no need to connect procurement or sales systems with multiple trading partner systems; the ProcServe Commerce Hub takes care of all technical connectivity and content sharing requirements, providing a fast, efficient and secure method of electronic trading.
